Lightener Control™

LIGHTENER CONTROL

Lightener Control™ is a blend of Keratin amino acids, essential fatty acids, and humectants that act on the three primary components of hair: tensile strength, elasticity, and cuticle abrasion. Quaternized Keratin further **protects the internal bonds of the hair** while moisturizing humectants adhere to the cuticle layers for balanced contact saturation and an added defense from the harsh effects of lightening.

Lightener Control™ transforms lighteners into an ultra-smooth, creamy medium that is perfect for non-slip foiling and balayage. This soft, fluid gel provides ideal control for perfect, balanced results.

- **No change in developer needed**
- **Reduces the harmful effects of the lifting process**
- **Keratin adheres to the bonds of the hair for ultimate protection**
- **Amino acids add strength and elasticity to prevent breakage**
